Shri Sant Gajanan Maharaj College of Engineering Shegaon

Electrical Engineering Department

Course Title & Course Code: Signals& Systems (5EP04)

Class: Third year Electrical Semester: V

Name of the Course Teacher: Dr A.U.Jawadekar

Title of the innovative practice: Mind maps

Objectives/Goals of the practice:

The primary goal of using a mind map in teaching Signal Processing is to provide a visual and structured approach to understanding key concepts

Use of Appropriate Methods:

The mind map is created using digital tools such as:XMind, MindMeister,

The central topic "Signal Processing" was defined.

Subtopics such as Signals, Systems, Filters, Transforms, and Applications were branched out.

Students were encouraged to add their own nodes for personalized learning.

Significance of Results:

Students recall key concepts more effectively.

Understanding of Fourier Transform, Convolution, and Filtering improves.

More interactive and engaging than traditional lectures

Quick revision tool – Useful for exam preparation and practical applications

Effective Presentation:

The mind map is presented through:

- Projector/Screen-sharing for live discussions.
- Link : https://www.mindmeister.com/app/map/3651885092

Photos :

POs Mapped: PO1,PO2,PO5,PO12

Reflective Critique:

Students gave feedback that the mind maps enhanced clarity of complex signal processing concepts.

Faculty observed student engagement levels and suggested to expand it for deeper topics.

Peer Review & Critique Form Link: https://forms.gle/a8idX85bJXqk5PUT9

Evidences of success:

- 75% of students actively participated in the discussion.
- Few students applied the mind map technique to other subjects

Challenges faced during implementation:

- Some students found it difficult to create structured mind maps initially
- Overloaded maps with too much information can be confusing
